"The After-Normal is a compendium of short environmental and personal essays, mainly addressing climate change and the natural world. It is written collaboratively by David Carlin and Nicole Walker. They each wrote at least one

essay for each letter of the alphabet, so the book is an abecedarian work. The authors are not scientists, but writers, so the essays are personal, ecological, political, and historical in nature. Many include endnotes with sources"--

The Coastal Everglades presents a broad overview and synthesis of research on the coastal Everglades, a region that includes Everglades National Park, adjacent managed wetlands, and agricultural and urbanizing communities. Contributors for this volume are all collaborators on the Florida Coastal Everglades Long-Term Ecological Research Program (FCE LTER). The FCE LTER began in 2000 with a focus on understanding key ecosystem processes in the coastal Everglades, while also developing a platform for and linkages to related work conducted by an active and diverse Everglades research community. The program is based at Florida International University in Miami, but includes scientists and students from numerous other universities as well as staff scientists at key resource management agencies, including Everglades National Park and the South Florida Water Management District. Though the Everglades landscape spans nearly a third of the State of Florida, the focus on the coastal Everglades has allowed the contributors to examine key questions in social-ecological science in the context of ongoing restoration initiatives. As this book demonstrates, the long-term research of the FCE LTER has facilitated a better understanding of the roles of sea level rise, water management practices, urban and agricultural development, and other disturbances, such as fires and storms, on the past and future dynamics of this

unique coastal environment. By comparing properties of the Everglades with other subtropical and tropical wetlands, the book challenges ideas of novelty while revealing properties of ecosystems at the ends of gradients that are often ignored. It also provides insights from, and encouragement for, long-term collaborative studies that inform resource management in similarly threatened coastal wetland landscapes.

Claims that Shakespeare resists an emergent, exclusionary post-reformation ideology of 'true' Englishness in his early plays.

This book is based on presentations by some of the world's leading experts at the Sixth International Conference on Clinical Cancer Prevention, held in St. Gallen, Switzerland, during March 2010. The main themes are the latest advances in the prevention of breast and prostate cancer and the role of infection in the development of liver and gastric cancer. Special emphasis is given to perspectives on the chemoprevention of breast cancer, as the conference included an international consensus meeting on this subject. New research findings are presented and potentially more effective cancer prevention strategies are discussed, with careful consideration of controversies. The expertise of the contributors encompasses genetics and microbiology, epidemiology, and health economics, as well as clinical cancer prevention. This book will be of interest to all who wish to learn about the most recent progress in combating the development of

Urban Raptors is the first book to offer a complete overview of urban ecosystems in the context of bird-of-prey ecology and conservation. This comprehensive volume examines the urban environment, explains why some species adapt to urban areas but others do not, and introduces modern research tools to help in the study of urban raptors. It delves into climate change adaptation, human-wildlife conflict, and the unique risks birds of prey face in urban areas before concluding with real-world wildlife management case studies and suggestions for future research and conservation efforts. Among researchers, urban green space planners, wildlife management agencies, birders, and informed citizens alike, Urban Raptors will foster a greater understanding of birds of prey and an increased willingness to accommodate them as important members, not intruders, of our cities.

Students of conservation encounter some of the most complex issues on our planet. The resolution of existing problems become more complex when humans create further stresses on the natural balance. Moulton and Sanderson brought the challenging issues in wildlife conservation into greater clarity in Wildlife Issues in a Changing World. The Second Edition of this definitive reference focuses more closely on the causes of wildlife issues. The examination of Jared Diamond's "Evil Quartet" (the four principal causes of extinction) provides a framework for

categorizing and resolving these issues. The authors encourage the use of the scientific method basis for resolution - especially where environmental laws have failed. The three new chapters provide further counterpoints to preconceived notions. A two-part history of wildlife in the U.S. shows how wildlife had already been decimated by the year 1900. "Can Humans Manage Wildlife?" questions efforts to revive endangered species, acts which may inadvertently jeopardize the survival of other life. Viewing the natural order from prehistoric times to the present, *Wildlife Issues in a Changing World, Second Edition* gives students and instructors an all-encompassing introduction to past relations between humans and nature; explorations of current threats to species and their habitats; and recent "novel solutions," where humanity and industry have made adjustments to protect the natural order. Professionals will also find invaluable reminders of the importance of their work - the continuation and endurance of wildlife everywhere on Earth.

Ever since the term "creative nonfiction" first came into widespread use, memoirists and journalists, essayists and fiction writers have faced off over where the border between fact and fiction lies. This debate over ethics, however, has sidelined important questions of literary form. *Bending Genre* does not ask where the boundaries between genres should be drawn, but what happens when you push the line. Written for writers and students of creative writing, this collection brings together perspectives from today's leading writers of creative nonfiction,

including Michael Martone, Brenda Miller, Ander Monson, and David Shields. Each writer's innovative essay probes our notions of genre and investigates how creative nonfiction is shaped, modeling the forms of writing being discussed. Like creative nonfiction itself, *Bending Genre* is an exciting hybrid that breaks new ground.

Scandinavia from 1700 to the end of the First World War - the age of Bach and the Enlightenment, and fundamental social and political change.

They also consider the artists' responses to foreign prototypes, travel and training, changing exhibition venues, and audience expectations. The persistence of certain themes--childhood, marriage, the family, and the community; the attainment and reinforcement of citizenship; attitudes toward race; the frontier as reality and myth; and the process and meaning of making art--underscores evolving styles and standards of storytelling. Divided into four chronological sections, the book begins with the years surrounding the American Revolution and the birth of the new republic, when painters such as Copley, Peale, and Samuel F.B. Morse incorporated stories within the expressive bounds of portraiture. During the Jacksonian and pre-Civil War decades from about 1830 to 1860, Mount, Bingham, Lilly Martin Spencer, and others painted genre scenes featuring lighthearted narratives that growing audiences for art could easily read and understand.
