Although the speed of all  
electromagnetic waves in a vacuum is  
the same, waves can have different  
wavelengths and frequencies. As you  
can see from the equation on the  
previous page, wavelength and  
frequency are inversely related; in  
other words, as one quantity  
increases, the other decreases.

Electrons are found in certain orbits located around the nucleus. Every electron has a fixed energy in certain energy levels: they are said to be quantized. Electrons farther away from the nucleus have higher energy than electrons closer to the nucleus. Energy levels are closer together the farther away from the nucleus.
