The 19th CIRP Conference on Life Cycle Engineering continues a strong tradition of scientific meetings in the areas of sustainability and engineering within the community of the International Academy for Production Engineering (CIRP). The focus of the conference is to review and discuss the current developments, technology improvements, and future research directions that will allow engineers to help create green businesses and industries that are both socially responsible and economically successful. The symposium covers a variety of relevant topics within life cycle engineering including Businesses and Organizations, Case Studies, End of Life Management, Life Cycle Design, Machine Tool Technologies for Sustainability, Manufacturing Processes, Manufacturing Systems, Methods and Tools for Sustainability, Social Sustainability, and Supply Chain Management.

First Edition received 2012 First Place AJN Book of the Year Award in Nursing Research!

“ This is a resource for success and should be a part of any researcher's library.” --Doody's Medical Reviews (Praise for the First Edition) Written for researchers, clinicians and doctoral students, the newly revised edition of this comprehensive reference continues to deliver the essentials of intervention research with added content on evidence-based quality improvement, a must for improving healthcare quality, safety and population health outcomes. Although typically it takes years for research-based interventions to make their way to real world clinical settings, this “ prolonged time for translation ” frustrates researchers and their interprofessional teams. This second edition now delves even deeper into key strategies for rapidly moving research-based interventions into real world settings in the form of evidence-based quality improvement as well as the challenges of working in an increasingly diverse professional research environment. Intervention Research and Evidence-Based Quality Improvement, Second Edition begins at the pilot study phase for intervention research and highlights every step of the way through to full-scale randomized controlled trials. Written in user-friendly format, content covers designing, conducting, analyzing, and funding intervention studies that improve healthcare quality and people ' s health outcomes. Chapters cover writing grant applications and show examples of actual applications that have been funded by NIH and other organizations. These real-life samples are available online, alongside additional progress reports and final reports. Real-world examples of evidence-based quality improvement projects that have improved outcomes also are highlighted in this second edition. New to the Second Edition: Describes evidence-based quality improvement and specific steps in conducting EBQI projects, which are essential for enhancing healthcare quality, safety and costs along with enhancing population health outcomes. Emphasizes the importance of interprofessional teams Focuses on using research-based interventions in real-world settings Six new chapters o Generating Versus Using Evidence to Guide Best Practice o Setting the Stage for Intervention Research and Evidence-based Quality Improvement o Evidence-based Quality Improvement o Translational Research: Why and How o Factors Influencing Successful Uptake of Evidence-Based Interventions in Clinical Practice o Using Social Media to Enhance Uptake of Research-Based Interventions into Real World Clinical Settings Key Features: Provides a practical, comprehensive resource for designing, conducting, analyzing, and funding intervention studies Outlines the specific steps in designing, conducting and evaluating outcomes of evidence-based quality improvement projects Includes examples of funding research grants, progress reports, and final reports Serves as a core text for students in doctoral nursing and other health sciences programs

Habituation describes the progressive decrease of the amplitude or frequency of a motor response to repeated sensory stimulation that is not caused by sensory receptor adaptation or motor fatigue. Habituation can occur in different time scales: habituation within a testing session has been termed short-term habituation, whereas habituation across testing sessions has been termed long-term habituation. Generally, the more spaced the stimuli for inducing habituation are presented (i.e. the slower habituation is induced), the longer it seems to take to recover the behavioural response to its initial magnitude. Habituation is opposed by behavioural sensitization, which is thought to be an independent mechanism that leads to an increased behavioural response, especially if the sensory stimulus is annoying or aversive. Habituation provides an important mechanism for filtering sensory information, as it allows filtering out irrelevant stimuli and thereby focussing on important stimuli, a prerequisite for many cognitive tasks. The importance is demonstrated in mental disorders that are associated with disruptions in habituation, e.g. schizophrenia and autism spectrum disorders. The inability to filter out irrelevant information in patients with these disorders strongly correlates with disruptions in higher cognitive functions, such as in

different types of memory and attention. Habituation is also considered to be the most basic form of non-associative implicit learning, and it can be observed throughout the animal kingdom. Based on the importance of habituation for cognitive function and therefore for the survival of an animal, it is assumed that habituation mechanisms are highly conserved across species. On the other hand, there is emerging evidence for a multitude of homo- and heterosynaptic mechanisms underlying habituation, depending on the modality of sensory stimulation, the level of sensory information processing where habituation occurs, and the temporal composition of sensory stimulation. Eric Kandel used the sea hare *Aplysia* in order to study habituation mechanisms of the gill withdrawal reflex; however, the molecular mechanisms remain largely elusive to date. A multitude of different organisms, behaviours, and experimental approaches have been used since in order to study habituation, but still surprisingly little is known about the underlying mechanisms. New insights also come from an unexpected side: in the recent past, groups that have been studying molecular mechanisms underlying short- and long-term synaptic plasticity phenomena in different parts of the rodent brain are starting to link these plasticity processes to behavioural habituation. The scope of this Frontier Research Topic is to give an overview over the concept of habituation, different animal and behavioural models used for studying habituation mechanisms, as well as the different synaptic and molecular processes suggested to play a role in behavioural habituation through Original Research Articles, Methods, Hypothesis & Theory Articles, and Reviews.

You've experienced the shiny, point-and-click surface of your Linux computer—now dive below and explore its depths with the power of the command line. The Linux Command Line takes you from your very first terminal keystrokes to writing full programs in Bash, the most popular Linux shell. Along the way you'll learn the timeless skills handed down by generations of gray-bearded, mouse-shunning gurus: file navigation, environment configuration, command chaining, pattern matching with regular expressions, and more. In addition to that practical knowledge, author William Shotts reveals the philosophy behind these tools and the rich heritage that your desktop Linux machine has inherited from Unix supercomputers of yore. As you make your way through the book's short, easily-digestible chapters, you'll learn how to:

- * Create and delete files, directories, and symlinks
- * Administer your system, including networking, package installation, and process management
- * Use standard input and output, redirection, and pipelines
- * Edit files with Vi, the world's most popular text editor
- * Write shell scripts to automate common or boring tasks
- * Slice and dice text files with cut, paste, grep, patch, and sed

Once you overcome your initial "shell shock," you'll find that the command line is a natural and expressive way to communicate with your computer. Just don't be surprised if your mouse starts to gather dust. A featured resource in the Linux Foundation's "Evolution of a SysAdmin"
