Focuses on the analysis, optimization and controllability of time-discrete dynamical systems and games under the aspect of stability, controllability and (for games) cooperative and non-cooperative treatment. The investigation of stability is based on Lyapunov's method which is generalized to non-autonomous systems. Optimization and controllability of dynamical systems is treated, among others, with the aid of mapping theorems such as implicit function theorem and inverse mapping theorem. Dynamical games are treated as cooperative and non-cooperative games and are used in order to deal with the problem of carbon dioxide reduction under economic aspects. The theoretical results are demonstrated by various applications.

For those who find themselves in a battle for public records, *Access with Attitude: An Advocate's Guide to Freedom of Information in Ohio* is an indispensable weapon. First Amendment lawyer David Marburger and investigative journalist Karl Idsvoog have written a simply worded, practical guide on how to take full advantage of Ohio's so-called Sunshine Laws.
