Argues that public finance--the study of the government's role in

economics--should incorporate principles from behavior economics and other branches of psychology.

The efficient markets hypothesis has been the central

proposition in  
finance for nearly  
thirty years. It  
states that  
securities prices in  
financial markets  
must equal  
fundamental values,  
either because all  
investors are  
rational or because  
arbitrage eliminates  
pricing  
anomalies. This

Statement Analysis describes an alternative approach to the study of financial markets: behavioral finance. This approach starts with an observation that the assumptions of investor rationality and perfect arbitrage are overwhelmingly

contradicted by  
both psychological  
and institutional  
evidence. In actual  
financial markets,  
less than fully  
rational investors  
trade against  
arbitrageurs whose  
resources are  
limited by risk  
aversion, short  
horizons, and  
agency problems.
