~~Switch to a Kent BCF2 or a 224 and you'll be approaching 110bhp. For all builds we would recommend ARP rod bolts and replacement of the front pulley for a one piece steel item. The valve train should be strengthened with steel posts, spacers and rocker shaft to cope with the additional stresses caused by high lift cams, HD valve springs and higher revs.~~

Ford Kent Crossflow Tuning Guide - Burton Power

Kents are quite easy to tune to GT spec, which usually means the biggest capacity block, slightly bigger valves (usually taken care of with a performance head), GT cam/Al, free flow exhaust and twin choke Weber - you should see around 80-90bhp. Switch to a Kent BCF2 or a 224 and you'll be approaching 110bhp.

Tuning guides for Kent / X-Flow - Classic Ford

Ford Kent Engine Modification Ford Kent Crossflow Tuning Guide. This engine was introduced in the Ford Mk2 Cortina and differs from the earlier units by having the carb on the left and the exhaust on the right - hence, 'crossflow.'. They also varied from Pre-X/Flows in that the combustion chamber was shifted from the head

Shortening the Ford Kent (crossflow) sump Background. When I first fitted the Kent engine into my Locost everything seemed fine - until I looked underneath and realised that I had about 2.5" (about 60mm) ground clearance! It was obvious that something had to be done, otherwise I'll be fitting every little bump in the road.

Ford Kent Engine Modification The later "uprated" or "Kent" engine used a heavier crankshaft, introduced the flush cylinder head and became the predominant engine used in Formula Ford after its introduction in 1971. In the United States, these engines were found in the '71 - '73 Pinto and later, with some variations, in the Ford Fiesta. History :: The KENT Engine :: thekentlives.com

Ford Kent Engine Modification

Tilton Race Clutch. This Ford Kent crossflow 1,600cc engine was built in 2007 by BHP in Allentown, Pennsylvania and features 10.5:1 compression pistons, a Cortina 295 camshaft, and dry-sump oil pump. It was destined for the selling dealer's Caterham 7 autocrosser, which was traded for another car before the engine was finished. Affixed to a stand and stored in a climate-controlled showroom ever since, the engine has been reportedly hand-turned every couple of years.

Ford Cross Flow (Kent) - Burton Power

Cosworth increased its association with Ford in 1969, by developing a double overhead camshaft (DOHC) 16-valve inline four-cylinder engine for road use in the Ford Escort. Working from the Kent block, Cosworth created a 1,601 cc for homologation purposes. The camshafts were driven by a toothed belt, hence the name BDA, literally meaning "Belt Drive, A type". Running in Group 2 and Group 4 on either rallying or touring car racing, this engine could be enlarged to a maximum of 2,000 cc.
