Probability Problems And
Solutions

Here is a list of top fourteen problems on genetics along with its relevant solution. Problem 1: Albinism is recessive to normal body pigmentation in man. It is an autosomal trait. If a homozygous normal man marries an albino girl, what would be the phenotypic and genotypic ratios in F₂ generation from this marriage? Solution:

MENDELIAN GENETICS PROBLEMS

To provide a scientific context for our probability problems, we will use examples from genetics.

Genetics is almost unique among the sciences, in that its fundamental laws were stated as probability laws. Thus the probabilities we compute have a reality as long-run frequencies, and are not just subjective. For example, the probability a parent of blood-type O has a child of blood-type O is the proportion of times this event occurs among all children of all parents of blood type O.

But genetics is a statistical science, and problems can also be solved using statistics. • When solving a genetics problem, you are calculating probabilities. The probability of a particular event is the “ chance ” that event will occur.
