~~Guided Imagery for Relaxation and Stress Management~~

Guided imagery is a focused practice that involves each of the five senses to ignite positive healing messages throughout the mind and body. The practice is often interchanged with visualization, self-hypnosis and guided meditation, but it has its own set of techniques. The benefits of guided imagery are vast — there is research that shows the practice can reduce fear and anxiety, lessen the frequency of headaches and has been proven to decrease psychological distress in cancer patients.

~~Guided Imagery—YouTube~~

Mental imagery is described as “repetitive mental practice or mental training that designates mental representation of the performance of a motor pattern without concomitant production on the muscular activity normally required for the act.”

~~Mental Imagery—Physiopedia~~

Guided imagery is simply the use of one's imagination to promote mental and physical health. It can be self-directed, where the individual puts himself into a relaxed state and creates his own images, or directed by others.
