## Introduction To The Skeletal System

### Introduction to the Skeletal System

Humans are vertebrates, animals having a vertebral column or backbone. They rely on a sturdy internal frame that is centered on a prominent spine. The human skeletal system consists of bones, cartilage, ligaments and tendons and accounts for about 20 percent of the body weight.

replace bone that has ben diseased, damaged, or surgically removed. Cells in the body remodel the synthetic material and produce new bone. What bone cells do you think are involved in this remodeling, and what role do these cells have? Osteoclasts dissolve away some of the bone tissue and osteoblasts add new bone tissue.

## Exercise 6 - Introduction to the Skeletal System - Review ...

The human skeleton is the internal framework of the body. It is composed of 270 bones at birth and decreases to 206 bones by adulthood after some bones have fused together. The human skeleton serves ...
