The Tector 6 cylinder 6 litre engines are available in 4 power variants: 180 HP (570 Nm of torque from 1,300 to 2,100 revs). 220 HP (680 Nm of torque from 1,200 to 2,100 revs). 240 HP (810 Nm of torque from 1,250 to 2,100 revs).

Eurocargo Tector 6 cylinder engines - IVECO Brands

New Euro VI FPT engines, more powerful than ever FPT Industrial, a market leader in power-train technology, supplies the new Iveco Eurocargo with evolutions of its Tector engines to meet Euro VI emission regulations. The updated and upgraded 4-cylinder Tector 5 and 6-cylinder Tector 7 will replace the previous Tector 4 and Tector 6 engines.

New Euro VI FPT engines, more powerful than ever - Iveco
In Stock and Immediately Available This IVECO TECTOR F4AE Engine is very similar to the Cummins 4ISB except for fuel system. The Paccar 4ISB engine stopped using the 3.9Ltr after EURO 3 and reverted to the 4.5Ltr Block after EURO4. IVECO TECTOR F4AE remained a 3.9Ltr until Euro6 where the engine changed to the later 4.5Ltr specification

For the 180 model Iveco offer the three highest powered units from the new 6.7-litre Tector 7 engine; 250, 280 and 320hp. Transmission 4/5 Eaton's six-speed overdrive manual was the standard gearbox in most Eurocargos at Euro-3 and -4, complimented by Iveco's own nine-speed box with direct-drive top.

Iveco Eurocargo review | Auto Trader UK

IVECO S.p.A., an acronym for Industrial Vehicles Corporation, is an Italian industrial vehicle manufacturing company based in Turin, Italy, and a wholly owned subsidiary of CNH Industrial Group. It designs and builds light, medium and heavy commercial vehicles, quarry/construction site vehicles, city and intercity busses and special vehicles for applications such as firefighting, off-road missions, the military and civil defence. The name Iveco first appeared in 1975 after a merger of Italian, F

Reconditioned Iveco Eurocargo Engines For Sale

Research related to ambient particulate matter (PM) remains very relevant today due to the adverse effects that PM have on human health. PM are pollutants with varying chemical compositions and may originate from multiple emission sources, which directly affects their toxicity. To formulate effective control and mitigation strategies, it is necessary to identify PM sources and to estimate their influence on ambient PM concentration, a process that is known as source apportionment (SA). Depending on the geographical location and characteristics of an area, many anthropogenic and natural sources may contribute to PM concentration levels, such as dust resuspension, sea salt, traffic, secondary aerosol formation, industrial emissions, ship emissions, biomass burning, power plant emissions, etc. Different methodological approaches have been used over the years to study the aforementioned topics, but some scientific challenges remain, mainly related to the following subjects: real-time chemical analysis and SA, uncertainty estimation of SA results, and analytical optimization for PM samples. Additionally, there are areas in the world for which the results regarding composition and sources of PM are still scarce. The objective of this collection was to include studies on all aspects of PM chemical characterization and source apportionment regarding the inorganic and/or organic fractions of PM.

Reconditioned Iveco Eurocargo Engines For Sale

Mine-protected and mine-resistant, ambush-protected (MRAP) vehicles are today standard in the US, most major western armed forces and many other armies as a result of the wars in Iraq and Afghanistan. The South African Army was already routinely using mine-protected armored personnel carriers and patrol vehicles forty years ago even if they looked primitive and ungainly. A few years later, the South African Army had reached the stage where it could deploy entire combat groups into battle zones equipped with only mine-protected vehicles, including their ambulances and supply trucks. By then the mine-protected vehicles had also become effective for use in combat, rather than just protected transport, the Casspir being the chief example. More to the point, they saved countless soldiers and policemen from death or serious injury, and the basic concepts now live on in the various MRAP types in service today. The valuable lessons learned by the South Africans with their early designs of these combat-proven vehicles has led the country to become one of the global leaders in the design of MRAPs which are locally manufactured and exported around the world. Surviving the Ride is a fascinating pictorial account featuring more than 120 of these unique South African-developed vehicles, spanning a forty-year period, with over 280 photographs, many of which are previously unpublished.

Im Buch ist die Entwicklung der Emissionen aus der Verbrennung von Biokraftstoff en über einen Zeitraum von 15 Jahren beschrieben. Dazu wurden am Thünen-Institut für Agrartechnologie in Braunschweig limitierte und nicht limitierte Emissionen an sechs verschiedenen Dieselmotoren bestimmt, die in verschiedenen Abgasklassen bis Euro IV eingestuft waren. Dabei wurden hauptsächlich Motoren untersucht, die in Nutzfahrzeugen oder in landwirtschaftlichen Maschinen Verwendung finden. Als prominentester biogener Kraftstoff wurde Biodiesel aus Raps mit fossilem Dieselmkraftstoff bei allen Versuchsreihen verglichen. Daneben wurden reines Pflanzenöl, hydriertes Pflanzenöl und Fischer-Tropsch- Kraftstoff e sowohl in Reinkraftform als auch in Mischung mit Dieselmkraftstoff untersucht. Im Laufe der Jahre musste die Analysetechnik kontinuierlich an die immer sauberen Verbrennungsabgase angepasst werden. Probenahme und Messtechnik sind beispielhaft in dieser Arbeit beschrieben.

Reconditioned Iveco Eurocargo Engines For Sale

Gemische aus Dieselmkraftstoff en und Biodiesel neigen zur Alterung. Die Aufklärung des Alterungsprozesses stand im Fokus der Untersuchungen. Dabei wurden unter bestimmten Bedingungen Ausfallprodukte beobachtet, die Gegenstand chemischer und physikalischer Analysen waren. Es handelt sich dabei um Oligomere des Biodiesels, die bei der Alterung entstehen und für motortechnische Probleme sorgen können. Besonders bei hohen Temperaturen konnte die Bildung von Feststoff en beobachtet werden, die einen Zusammenhang zur Ölschlammbildung in Dieselmotoren nahe legen. Als Abhilfe konnten erfolgreich Alkohole als Lösungsmittel eingesetzt werden. Des Weiteren wurden Emissionsanalysen zur Untersuchung eines möglichen Einflusses der Oligomere auf die Mutagenität der Emissionen sowie der Auswirkung des Einsatzes von Alkoholen auf die Abgaszusammensetzung vorgenommen.

Systemwettbewerb der Antriebstechniken: Innovationsmotor für mehr Umwelt- und Klimaschutz - Erdgasfahrzeuge auf Europas Agenda - Welche Anforderungen stellt die Serienentwicklung an Gasfahrzeuge? Lösungsbeispiele und deren Kosten-Nutzen-Betrachtung - Antriebskonzept des bivalenten Erdgasfahrzeugs Mercedes-Benz E200 NGT - Entwicklung eines bivalenten Ottomotors für den Santana 3000 für den Taxi-Markt in China - Erdgasantrieb für Nutzfahrzeuge - Wirkungsgrad- und Emissionsverhalten von Erdgasmotoren mit Hochdruck-Direkteinblasung - Mageres CNG-Brennverfahren für minimale CO2-Emissionen - Ein CO2-minimales Antriebskonzept auf Basis des Kraftstoffes Erdgas - PKW-Erdgasantriebe für hohe Leistungsdichte und niedrigste Abgasemissionen - Moderne Adj-on Motorsteuerung für das Erdgasmanagement im Kraftfahrzeug - Elektronisches Gas-Einspritz-Steueresystem - Risikoanalyse bei der Entwicklung von CNG-Systemen im KFZ - Neue innovative Druckgasspeicher für Gasfahrzeuge - Vom Erdgas zum Wasserstoff - Experimentelle Untersuchungen zum Einsatz von Wasserstoff als Kraftstoff für Ottomotoren - Gemischbildungsuntersuchung in Gasmotoren mittels optischer Messverfahren, speziell in Wasserstoffmotoren - Wasserstoffmotor mit Direkteinblasung - Betriebsstrategien und Potenziale - Der Wasserstoff-Verbrennungsmotor: Ein grundlegender Konzeptvergleich - Die Motorenentwicklung wird seit geraumer Zeit von der Diskussion über die begrenzten Rohölreserven und der Notwendigkeit zur weltweiten Reduktion der CO2-Emissionen bestimmt. Ein weiterer zentraler Punkt ist die zunehmend stärkere Limitierung des Schadstoff- und Partikelausstoßes. Alternative, gasförmige Kraftstoffe finden daher in der Fahrzeugindustrie immer mehr Beachtung. Der Themenband bietet aktuelle Informationen zur Marktentwicklung und zu den politischen Rahmenbedingungen, zu neuen Entwicklungen im Bereich Motorsteuerung, Komponenten-, Abgas- und Sicherheitstechnik sowie zu Entwicklungstrends im Motoren- und Fahrzeugbereich (Erdgas-, Flüssiggas und Wasserstoffantriebe)
