If a manual transmission makes noises just when the clutch pedal is all the way up or engaged and a grinding or rattling noise is heard, the throw-out bearing for the clutch is bad. If the transmission makes a rattling noise that is loudest in neutral, although it is always there, and the noise changes when it is put into gear, but shifts well, the input shaft bearing is bad.

### **Diagnosing Manual Transmission Problems | It Still Runs**

For example, If you've got rattling or humming in your transmission from a bad bearing, you'll likely see a leak turn up soon as the bad bearings will allowing the input or output shaft to wobble which will ruin the seal. Similarly, harsh shifts can wear out clutches and bands and lead to slipping.

## **Transmission Noise and Other Signs of Transmission Problems**

Ive noticed a rattling noise that I'm quite confident is coming from the (manual) transmission. I mostly hear it in gear driving around. Pressing the clutch in will get rid of the sound (I can barely hear a rattle with the clutch in and truck moving). If I put it in neutral and give it gas I don't hear any rattle. So I think the exhaust is ...

## **Transmission rattle | Tacoma World**

The Transmission Fluid Level. It's not a major issue, but you would want to check it to rule out the obvious cause. The fluid should exactly be at the level instructed in the owner's

manual. Low level of fluid is one of the reasons for causing rattling noise when accelerating. It's a simple issue with a simple fix, but the consequence could be outright scary.

### **What Are the Reasons for Rattling Noise When Accelerating?**

The most common cause of a noisy transmission is insufficient oil, causing the gears or internal assembly to hum or whir. If a noisy transmission does have enough oil, the lubricant may be contaminated with metal shavings or particles. Insufficient or contaminated oil may cause the transmission to become noisy in some or all of the gears.

problem symptoms discussed in this guide: Rattle from the rear of the car at low RPM. Noise from drive train with engine idling and clutch pedal depressed.

## **Troubleshooting - Manual Transmission**

Sit in the vehicle with the engine idling and the shifter in park or neutral. Keep your foot off the brake pedal. Push the accelerator pedal, gently raising the engine rpm. If you notice a humming noise that increases in intensity as the engine rises in speed, it points to a malfunctioning transmission pump or pump shaft.

(UUC recommends a specific mix of transmission fluids, 1 bottle Redline 75W-140NS and 1 bottle Redline D4 ATF) will eliminate it entirely in some cars, or at least reduce the remaining rattle a subjective 90%. Some cars may always have a certain amount of rattle.

### **UUC \* TECH TIP: What causes gearbox rattle / rollover noise?**

Listen for noise with the transmission in gear and the clutch pedal to the floor. Next release the clutch with the transmission in first gear. Noise under this condition indicates a worn release bearing or a worn pilot bearing. To isolate the two, keep the clutch pedal on the floor and shift the transmission into neutral.
