Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.

The most complete and detailed information available on deploying, managing, and administering Microsoft's powerful network monitoring tool.

This IBM® Redbooks® publication is an IBM and Cisco collaboration that articulates how IBM and Cisco can bring the benefits of their respective companies to the modern data center. It documents the architectures, solutions, and benefits that can be achieved by implementing a data center based on IBM server, storage, and integrated systems, with the broader Cisco network. We describe how to design a state-of-the-art data center and networking infrastructure combining Cisco and IBM solutions. The objective is to provide a reference guide for customers looking to build an infrastructure that is optimized for virtualization, is highly available, is interoperable, and is efficient in terms of power and space consumption. It will explain the technologies used to build the infrastructure, provide use cases, and give guidance on deployments.

THE MUNICIPAL BUSINESS SYSTEM VIA THE ART OF FULL DISCLOSURE The above titled Book is intended to change the way local governments do NOT do "business". It is predicated on and dedicated to an achieved fact: There is NO compelling reason why cities, counties and government special districts cannot be run better than private businesses are alleged to operate. Local Government can be superior! Further, there is no reason for municipal services to be gutted as is being done and advocated, and/or outsourced for ideological and unknown undocumented cost-saving reasons. It is time local government defended itself against massive misinformation and lack of supporting data. Cities can, and should be run like a business . This Book details the adaptation of corporate line-of-business profit & loss corporate accounting to municipal services. The MUNICIPAL BUSINESS SYSTEM, explained in detail in this Book, has provided billions of new revenues to 250+ governments. Better yet, those monies were retrieved from those improperly benefitting from tax-supported direct benefit services. Previously, influential persons and organizations were subsidized by taxes paid by everyone. By providing a highly detailed inventory of services, then full costing information for each to the public and their elected representatives, huge amounts of tax monies were repatriated. Those monies were diverted from those who should pay fees, and returned to pay for services provided to the community at large. Thus Police, Fire, EMS, parks, recreation, library, street maintenance, and agreed-to social services were resuscitated. Through the MUNICIPAL BUSINESS SYSTEM process the tax and fee-paying public is provided detailed full disclosure of revenue, cost-of-service, and quality information for the hundreds of local services provided by most cities and counties. And choice if, when, how, and quantity provided. Thus re-inventing the manner in which taxes are used and service levels defined. At last, there is a SYSTEM to utilize computerization capabilities fully to provide a rationale and reasons for not cutting municipal budgets or privatizing local services, and thus destroying local government, its protections and services. Importantly, taxes paid by all can be utilized solely to finance services benefitting ALL, not subsidizing just the few to retain special local service benefits solely for personal, corporate, or business purposes, at the expense of the community at large. The Author utilized his decades of experience and knowledge acquired in-the-trenches to develop, refine, and apply the MUNICIPAL BUSINESS SYSTEM. He now shares with others what was labored over for 40 years of development by a corps of dedicated municipal employees, and ultimately with a brilliant group of financial analysts and CPAs, who designed and implemented the detailed highly sophisticated but simply computerized MUNICIPAL BUSINESS SYSTEM. Then Ayres taught the "how" at three major universities for 15 years. The Book provides sufficient textual overview, explanation, specific illustrations, examples, and details to know and control the cost of all services throughout the entirety of local - and maybe even state - governments. Douglas W. Ayres, MPA, LLD spent eight years with the University of Chicago's National Governmental Center (PAS) conducting scores of consulting engagements around the U.S., Canada and in Venezuela. He served as Town Clerk/Assistant Town Manager of Salem, Virginia; City Manager of Melbourne, Florida (Cape Canaveral); City Treasurer/Assistant City Manager, then City Manager of Salem, Oregon. As City Manager of Inglewood, California he installed the computerized MUNICIPAL BUSINESS SYSTEM. As a USC Graduate School Professor h

This one-of-a-kind new resource, written by an expert in the field, provides a comprehensive introduction to global e-navigation. This book presents the vision, development, and objectives of this strategy to increase awareness, safety, and security in the navigation of commercial shipping. Current equipment and practices of maritime navigation are discussed including ship reporting, shore based services, communications, and challenges in vessel travel services (VTS) and port areas. This book identifies performance gaps and demonstrates how to identify user needs as well as solutions through gap analysis. E-navigation architectures, solutions, and standards are explored. Readers find useful insight into how new concepts of e-navigation are being adapted internationally and some of the difficulties that will need to be overcome. This resource focuses on the use of e-navigation in security, cyber security, environmental protection, communications, and global and technical standardization. Navigation equipment, systems, displays, bridge systems, and other current equipment and practices are explored in this book. Readers get a look into the future of e-navigation, including the impact that digital globalization, unmanned ships, and big data will have on this strategy.

Network Function Virtualization provides an architectural, vendor-neutral level overview of the issues surrounding the large levels of data storage and transmission requirements needed for today's companies, also enumerating the benefits of NFV for the enterprise. Drawing upon years of practical experience, and using numerous examples and an easy-to-understand framework, authors Tom Nadeau and Ken Gary discuss the relevancy of NFV and how it can be effectively used to create and deploy new services. Readers will learn how to determine if network function virtualization is right for their enterprise network, be able to use hands-on, step-by-step guides to design, deploy, and manage NFV in an enterprise, and learn how to evaluate all relevant NFV standards, including ETSI, IETF, Openstack, and Open Daylight. Provides a comprehensive overview of Network Function Virtualization (NFV) Discusses how to determine if network function virtualization is right for an enterprise network Presents an ideal reference for those interested in NFV Network Service Chaining, NSC network address translation (NAT), firewalling, intrusion detection, domain name service (DNS), caching, and software defined networks Includes hands-on, step-by-step guides for designing, deploying, and managing NFV in the enterprise Explains, and contrasts, all relevant NFV standards, including ETSI, IETF, Openstack, and Open Daylight

Simple backups are no longer enough. To fully protect a modern IT infrastructure, you need sophisticated data protection technologies. This comprehensive guide to Microsoft ’ s new System Center Data Protection Manager 2007 (DPM) will help you improve your server security using this robust new software. The book thoroughly explains DPM ’ s unique abilities, and you ’ ll find step-by-step instructions on setting up and deployment. You ’ ll learn how to recover critical data and monitor processes for Exchange Server, SQL Server, SharePoint Server, Microsoft Virtual Server virtual machines, and Windows file servers and workstations.

To ensure its protection from enemies both foreign and domestic, a government must invest resources and personnel toward the goal of homeland security. It is through these endeavors that citizens are able to live out their lives in peace. Cases on Research and Knowledge Discovery: Homeland Security Centers of Excellence presents a series of studies and descriptive examples on the US Department of Homeland Security and related research. Through its investigation of interesting challenges and thought-provoking ideas, this volume offers professionals, researchers, and academics in the fields of security science, engineering, technology, and mathematics an in-depth discussion of some of the issues that directly affect the safety, security, and prosperity of the nation.

Ship it! Music to your ears or words that cause a cold sweat as you realize you now need to deploy the solution you have worked on for so long? Have you planned the deployment? Do you have the proper language in your contract with your customer? Do you have the proper install package? What media is the package going to be shipped on to the client? How will it be distributed? What happens after Setup.exe finishes? Do you have the support infrastructure in place? How are you going to handle updates and changes? There's a lot to think about, and deploying a solution requires careful planning. These questions and many more are answered based on real world experience within the pages of this book.
