This book presents theories and case studies for corporations in developed nations, including Japan, for designing strategies to maximize opportunities and minimize threats in business expansion into developing nations. The case studies featured here focus on Asia, including China and India, and use examples of Japanese manufacturers. Five case studies are provided, including Hitachi Construction Machinery and Shiseido in China and Maruti Suzuki in India. These cases facilitate the reader's understanding of the business environments in emerging economies. This volume is especially recommended for business people responsible for international business development, particularly in China and India. In addition, the book serves as a useful resource for students in graduate-level courses in international management.

Greatly revised and expanded, with a new afterword, this update to Martin Jacques's global bestseller is an essential guide to understanding a world increasingly shaped by Chinese power. Soon, China will rule the world. But in doing so, it will not become more Western. Since the first publication of *When China Rules the World*, the landscape of world power has shifted dramatically. In the three years since the first edition was published, *When China Rules the World* has proved to be a remarkably prescient book, transforming the nature of the debate on China. Now, in this greatly expanded and fully updated edition, boasting nearly 300 pages of new material, and backed up by the latest statistical data, Martin Jacques renews his assault on conventional thinking about China's ascendancy, showing how its impact will be as much political and cultural as economic, changing the world as we know it. First published in 2009 to widespread critical acclaim - and controversy - *When China Rules the World: The End of the Western World and the Birth of a New Global Order* has sold a quarter of a million copies,

been translated into eleven languages, nominated for two major literary awards, and is the subject of an immensely popular TED talk.

Metal recycling is a complex business that is becoming increasingly difficult! Recycling started long ago, when people realized that it was more resource- and cost-efficient than just throwing away the resources and starting all over again. In this report, we discuss how to increase metal recycling rates and thus resource efficiency from both quantity and quality viewpoints. The discussion is based on data about recycling input, and the technological infrastructure and worldwide economic realities of recycling. Decision-makers set increasingly ambitious targets for recycling, but far too much valuable metal today is lost because of the imperfect collection of end-of-life (EoL) products, improper practices, or structural deficiencies within the recycling chain, which hinder achieving our goals of high resource efficiency and resource security, and of better recycling rates.

This, fifty years after Sputnik, is the definitive book on the Russian space program. The author covers all the key elements of the current Russian space program, including both manned and unmanned missions. He examines the various types of unmanned applications programs as well as the crucial military program, and even analyzes the infrastructure of production, launch centres and tracking. You'll also find discussion of the commercialization of the program and its relationship with western companies. Russia's current space experiment is also put in a comparative global context. Strong emphasis is placed on Russia's future space intentions and on new programs and missions in prospect.

Whether you are a practicing radiation oncologist or a student of medicine, nursing, physics, dosimetry, or therapy, this handbook is a valuable resource covering the issues most pertinent to patients undergoing radiation therapy. Handbook of Radation Oncology covers general oncologic principles, workup, staging, and multidisciplinary aspects of treatment, basic principles of physics and radiobiology, and specific technologies including brachytherapy, radiosurgery, and unsealed sources.

This publication provides guidelines on how to plan a radiotherapy facility in terms of the strategic master planning process including the legal, technical and infrastructure requirements. It outlines a risk assessment methodology, a typical project work plan and describes the professional expertise required for the implementation of such a project. Generic templates for a block design are suggested, which include possibilities for future expansion. These templates can be overlaid onto the designated site such that the most efficient workflow between the main functional areas can be ensured. A sample checklist is attached to act as a guideline for project management and to indicate the critical stages in the process where technical expert assistance may be needed. The publication is aimed at professionals and administrators involved in infrastructure development, planning and facility management, as well as engineers, building contractors and radiotherapy professionals.

The project identified good Nordic management practices by analysing Nordic research on management, working conditions, and productivity. The project identified 2760 publications combining these topics and analysed in detail 38 core publications combining all three topics. The main findings were: 1. Nordic research that combine all three topics is limited in extend but broad in content and therefore fragmented 2. Values related to cooperation and participation permeated the publications, which sets them apart from EU and US publications. 3. The core publications identified positive relations between management practices, working conditions and workplace performance 4. Positive management practices are characterised by dialogue and cooperation between managers and subordinates. The research was conducted in 2012-2014 at Aalborg University, SINTEF, VTT, and Karlstad University.
