The design of the piston varies from engine to engine. It largely depends upon the design of the cylinder head. The top of the piston is called the head or crown. Generally, low-cost, low-performance engines have a flat-head-piston. However, in some cases, when the piston comes very close to the valves, the engineers provide a valve relief in ...

The design of the piston and the ring arrangement varies with the engine type and size, and some typical piston assemblies are shown in Fig.1. It will be seen that these vary quite noticeably in the proportions of the piston, and in the design of the ring pack, but all have gas sealing rings towards the high pressure end of the piston, and many have oil scraper rings towards the low pressure end.

While piston cooling is also an important part of any diesel engine design, most stock diesel engines are cooled by engine oil applied to the underside of the piston in various ways. Competition pulling tractors and trucks, drag racing trucks and cars, all use some type of water injection to keep combustion chamber temperatures at a manageable level.
