Principles Of Service Design

SOA is based on some key principles which are mentioned below . Standardized Service Contract - Services adhere to a service description. A service must have some sort of description which describes what the service is about. This makes it easier for client applications to understand what the service does. Loose Coupling – Less dependency on each other. This is one of the main characteristics of web services which just states that there should be as less dependency as possible between the ...

This is an excellent book on principles for  
service design in service-oriented  
architectures (SOAs). Other existing and  
planned books in the series deal with  
aspects such as the design of the SOA  
itself, the technological side of service-  
oriented computing platforms, and Web  
services. The book is organized into three  
parts.

Service-orientation design principles -  
Wikipedia

Service-oriented architecture is a style of software design where services are provided to the other components by application components, through a communication protocol over a network. A SOA service is a discrete unit of functionality that can be accessed remotely and acted upon and updated independently, such as retrieving a credit card statement online. SOA is also intended to be independent of vendors, products and technologies. A service has four properties according to one of many
