Hence this is a solution for every value of s and t . 2. b. The equation is $2x+3y = 1$. If $x = s$ then $y = \frac{1-2s}{3}$ so this is one form of the general solution.

Read Free Solution Manual

Also, if $y = t$ then $x = 1 - 2(1 - 3t)$ gives another form. 4.

Given the equation $4x - 2y + 0z = 1$, take $y = s$ and $z = t$ and solve for x : $x = \frac{1}{4}(2s + 3)$. This is the general solution. 5.

Slader :: Algebra Homework Answers and Solutions

A basic principle of this section is that row operations do not affect the solution set of a linear system.

Begin with a simple augmented matrix for which the solution is

Read Free Solution Manual

obviously $(3, -2, -1)$, and then perform any elementary row operations to produce other augmented matrices. Here are three examples.
