Academic Listening Encounters: The Natural World uses a sustained content approach to help students develop the listening, note-taking, and discussion skills they need to meet the demands of high school or college academic courses in an English-speaking environment. Academic Listening Encounters: The Natural World engages students with high-interest topics in the fields of Earth Science and Biology. The Audio Program consists of a class set of Audio CDs containing warm-up activities, informal interviews, and academic lectures. An Audio CD with the lectures is included in the student's book for extra practice. The companion book, Academic Encounters: The Natural World is a reading, study skills, and writing book that introduces students to high-interest topics closely related to the topics in the listening book.

Robert walked towards the hospital emergency entrance. The smell of death was overpowering. Many of the cars blocking the ambulance entrance had their lifeless occupants slumped over the steering wheels or their heads propped against the car windows. The sliding doors were propped open by more bodies of virus casualties. Robert looked deeper into the dark hospital and turned around. The hospital was not receiving more patients. Jillian stared over the city of Hong Kong from the eighteenth floor of the luxury hotel. Although it was the middle of the day, the entire city was dead. Not a car, boat or person was moving. The hotel had no water, phone or electricity. Despair washed over her as she thought of her children. She prayed that her two boys survived the virus. The problem was that they were a very large ocean away. Adapting to the new world was difficult. Finding and protecting your family was an even greater challenge.

The Academic Encounters Second edition series uses a sustained content approach to teach skills necessary for taking academic courses in English. There are two books for each content area. Academic Encounters Level 1 Student's Book Reading and Writing: The Natural World engages students through academic readings on stimulating topics from the fields of natural science and biology. Topics include the water cycle, plant and animal life, and the human body. Students develop important skills such as reading for the main idea, reading for speed, understanding vocabulary in context, and note-taking. By completing writing assignments, students build academic writing skills and incorporate what they have learned. The topics correspond with those in Academic Encounters Level 1 Listening and Speaking: The Natural World. The books may be used independently or together.

In their book Nicola Armaroli, Vincenzo Balzani and Nick Serpone uncover the background details associated with a transition to sustainable

energy production that are routinely swept under the table in public discussions. They are not only concerned with the (alleged) advantages and disadvantages of any one energy generation technology from a technical viewpoint, but also with the ecological, economic, political and social consequences of an inevitable transition. In a highly readable manner aimed at an international audience, the authors introduce the often misused and sometimes abused term 'energy' and give a lucid account of the development of energy production from timber to nuclear energy and renewable energies. They compare various energy generation methods with respect to their efficiency and practicability for large-scale implementation and examine if, and how, these methods live up to the expectations and promises their proponents make. In addition, the authors juxtapose the political and economic prerequisites in different regions of the world that advance, or hinder, an energy turnaround. They round off their book by debunking the seventeen most popular myths often cited in discussions on energy issues. As a result, the authors provide ammunition for debate, underpin (and unsettle) opinions using facts, and challenge comfortable and popular chains of reasoning.

This book is meant for teaching useful plants under the subject heading of "Economic Botany". The most important useful herbs of the planet earth are explained in terms of their active chemical compounds and relevant properties. All the conventional topics such as Food plants, spices, timber etc have been revamped with the latest research inputs on those plants and the new features of these products. Herbal Cosmetics, Antioxidant therapy, Natural Dyes, perfumery and Aromatherapy, Biopesticides, Biofuel and Biofertilisers are added which will increase the acceptance of plant-based courses. In addition, in the beginning of each chapter, relevant chemistry of natural products is added which will explain the said actions in a meaningful way.

A content-based reading, writing, listening, and speaking set that introduces students to topics in Earth science and biology.
