In January 2000, Mercedes-Benz started to implement the Mercedes-Benz Production System (MPS) throughout its worldwide passenger car plants. This event is exemplary of a trend within the automotive industry: the creation and introduction of company-specific standardised production systems. It gradually emerged with the introduction of the Chrysler Operating System (COS) in the mid-1990s and represents a

distinct step in the process towards implementing the universal principles of lean thinking as propagated by the MIT-study. For the academic field of industrial sociology and labour policy, the emergence of this trend seems to mark a new stage in the evolution of the debate about production systems in the automotive industry (Jürgens 2002:2), particularly as it seems to undermine the stand of the critics of the one-best way model (Boyer and Freyssenet 1995). The introduction of company-level standardised production systems marks the starting point of the present study. At the core of it is a case study about the Mercedes Benz Production System (MPS).

defines specific requirements for the application of ISO 9001: 1994 throughout the automotive supply chain. While initially the standard will be voluntary, for the first time, second and third tier suppliers may be faced with pressure to undergo third party registration. After the year 2000, the next version of the standard has actually replaced the four existing standards, (AVSQ, EAQF, QS-9000 and VDA 6 1) and the price of entry to the global automotive market is conformance to this new standard. This handbook is an essential and comprehensive guide to enable organizations to interpret and implement the ISO/TS 16949. Unlike other books on the subject, each element, clause and requirement is analyzed in detail with guidance provided for its implementation. The handbook is written primarily for implementers and discerning
